Task 1 -

This is basically my Jira dashboard for my project - automatic rubric evaluator

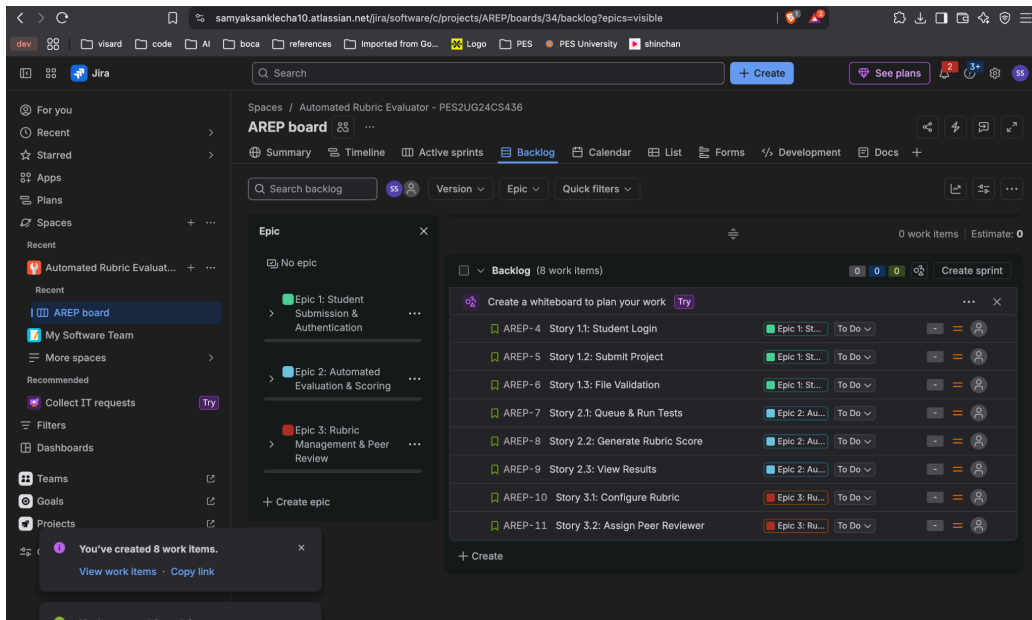

Task 2 -

I have created three epics (they are my major tasks which need to be completed and they are separated category wise)

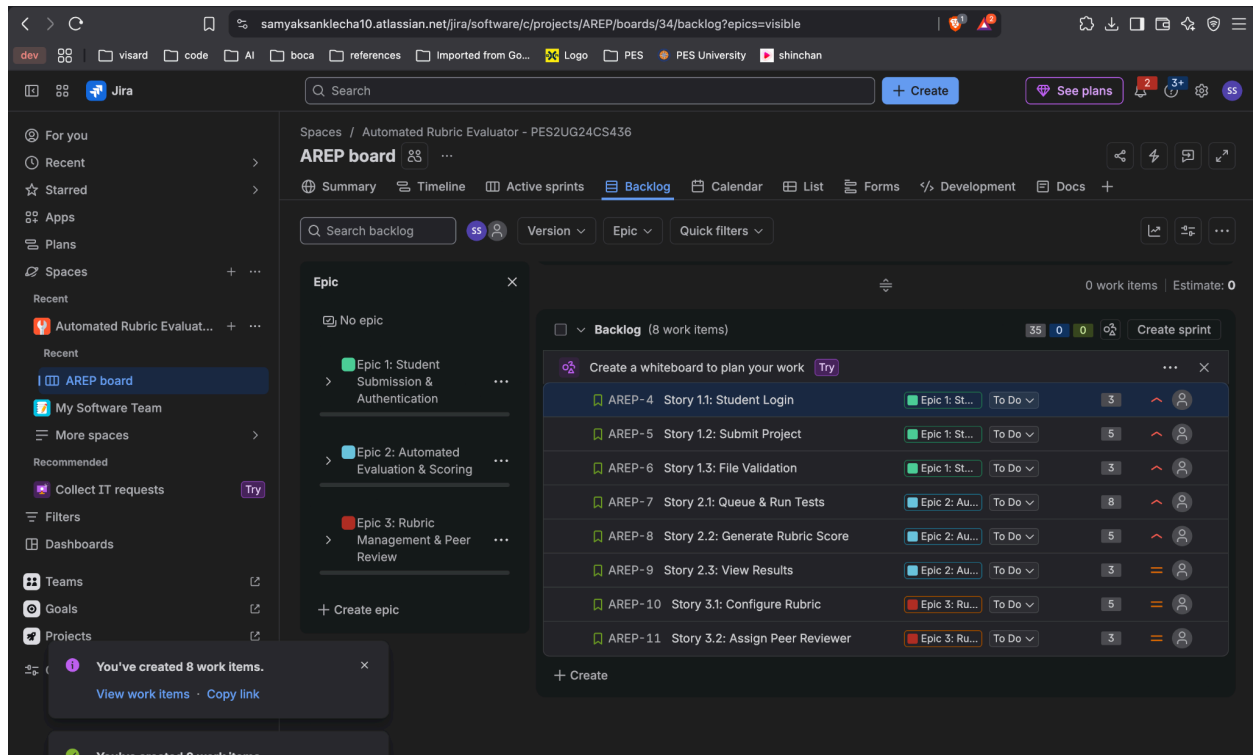

Task 3 -

This is my backlog part where i created user stories (the features for users) per epic like small tasks in the major task

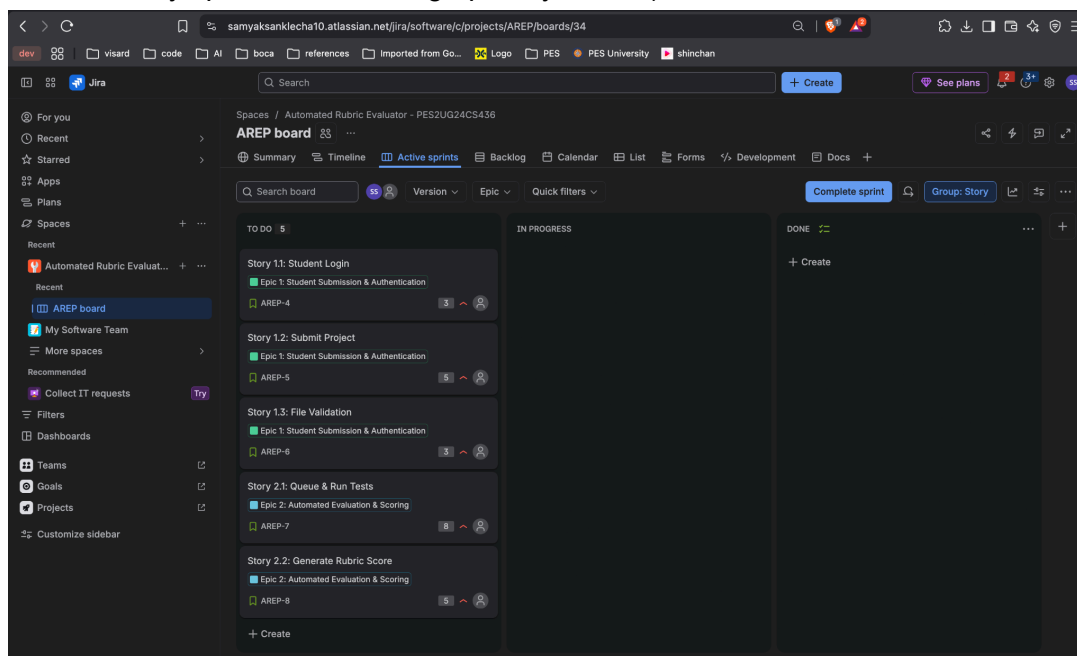

Task 4-

Now i have added priority and story points to each of the stories

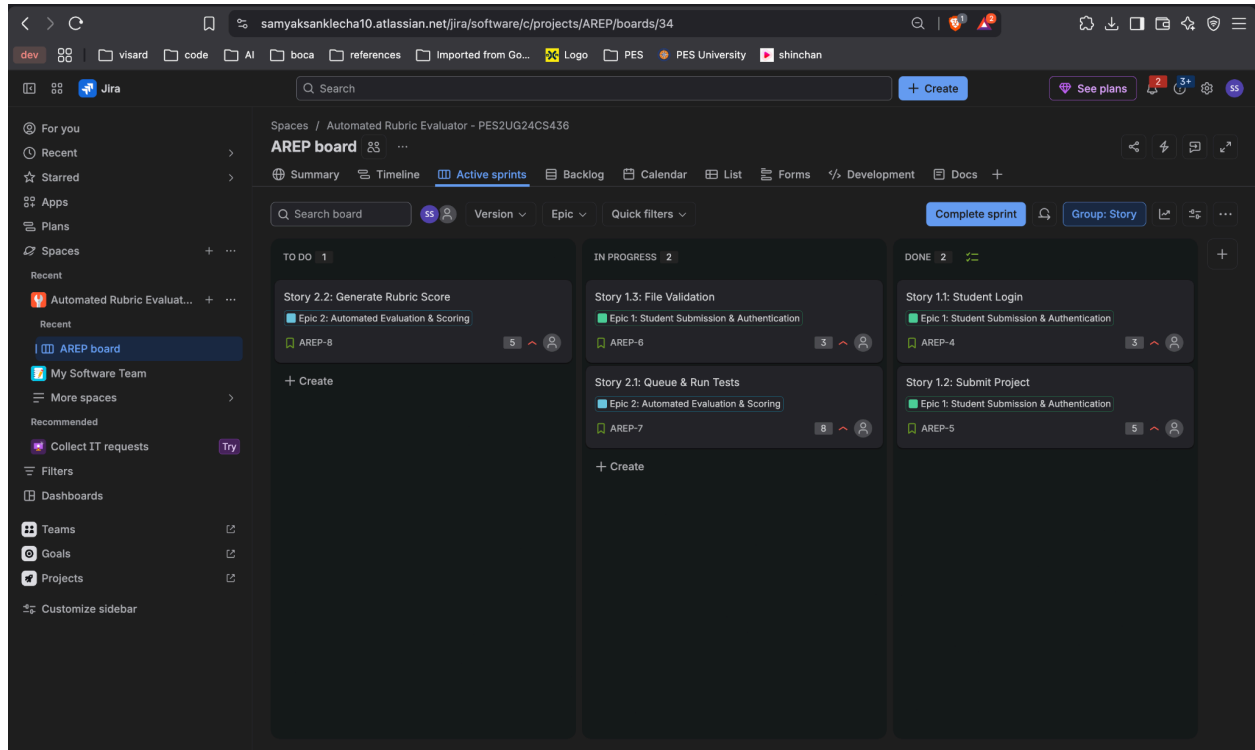

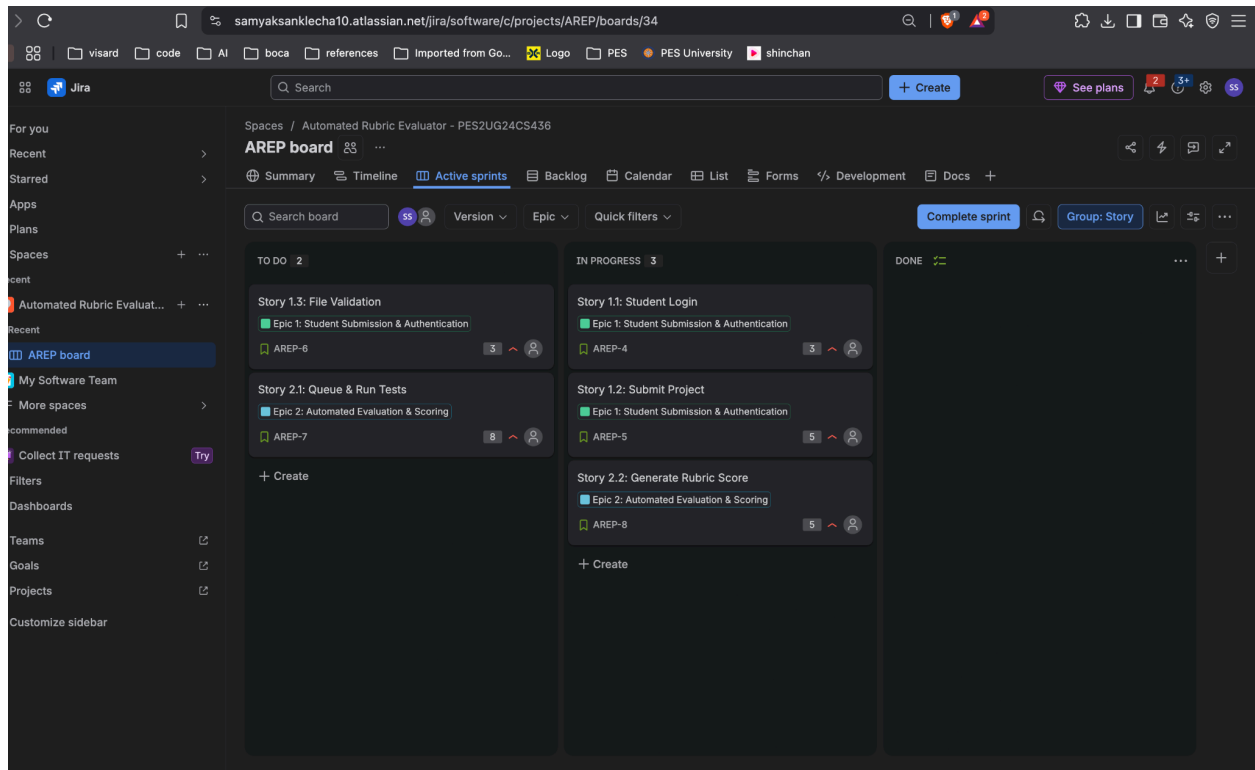

Task 5 -

This is my sprint dashboard where i will track the user stories (and my timeline is 1 week for it and this is my sprint 1 with the high priority stories)

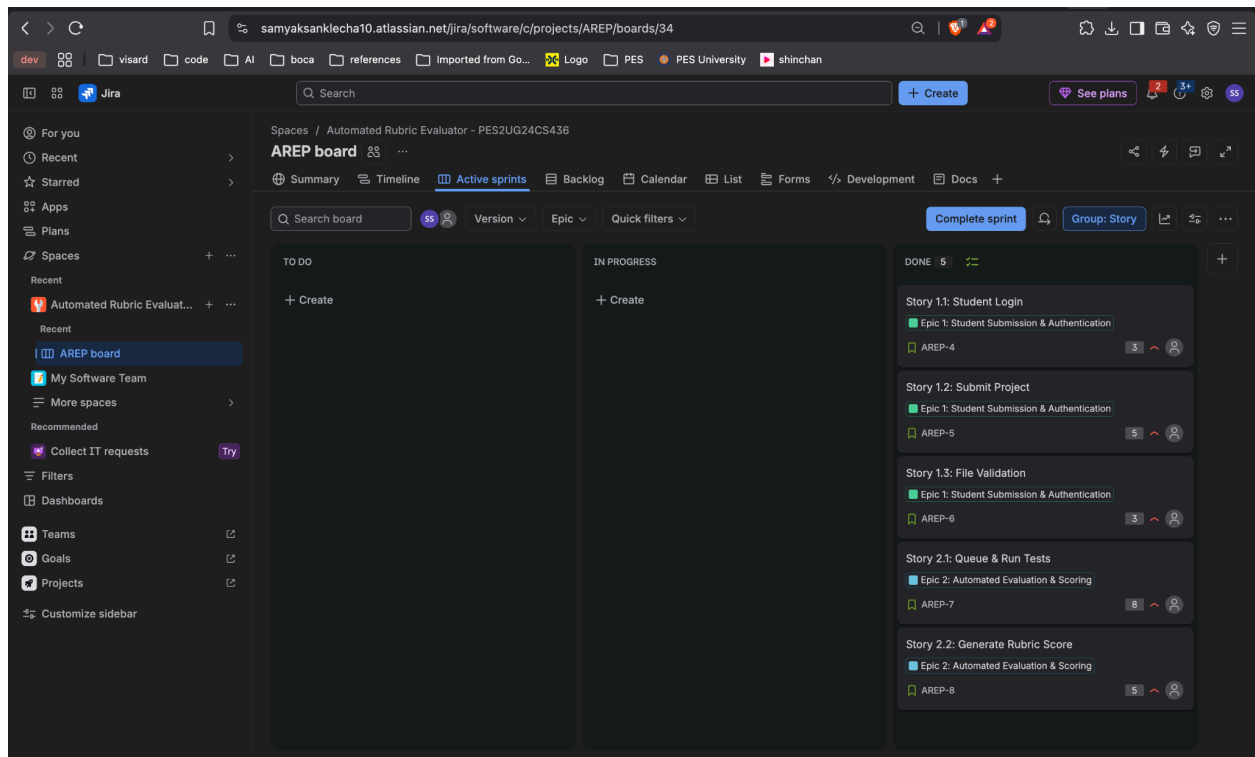

Task 6 -

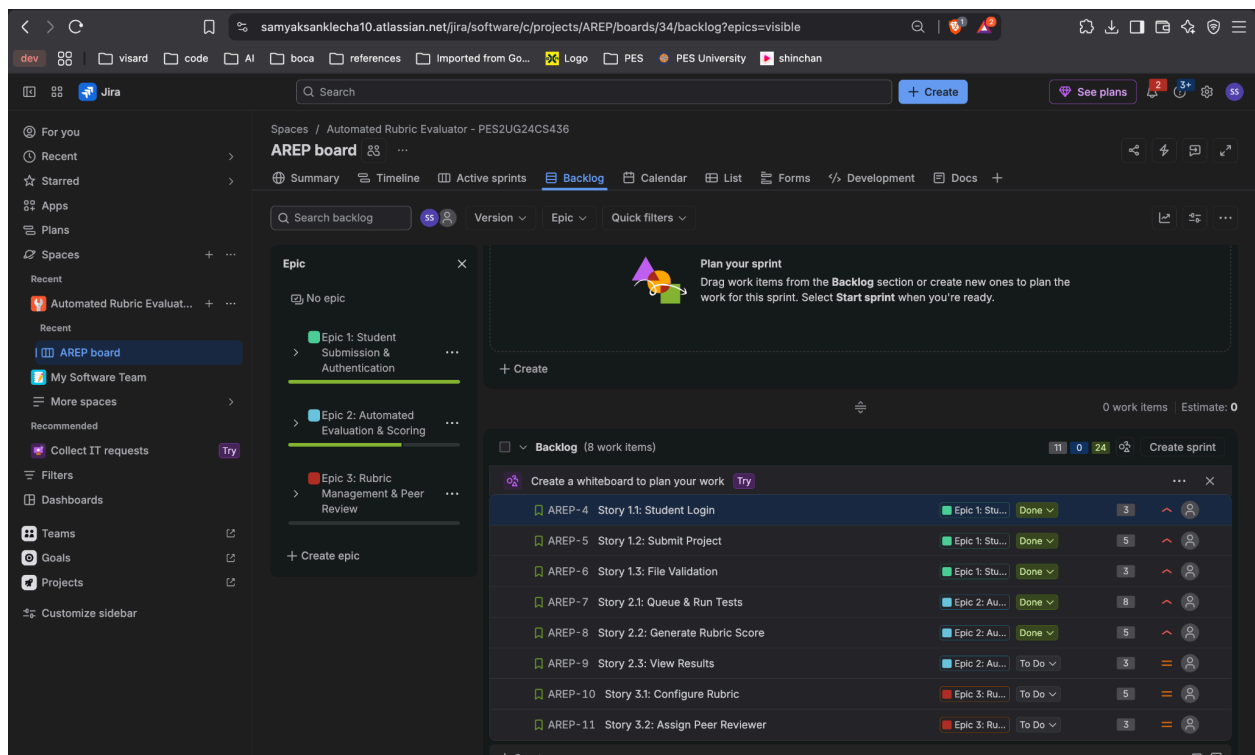

This is how in progress tasks are

All the tasks in sprint 1 are completed and the sprint can be completed

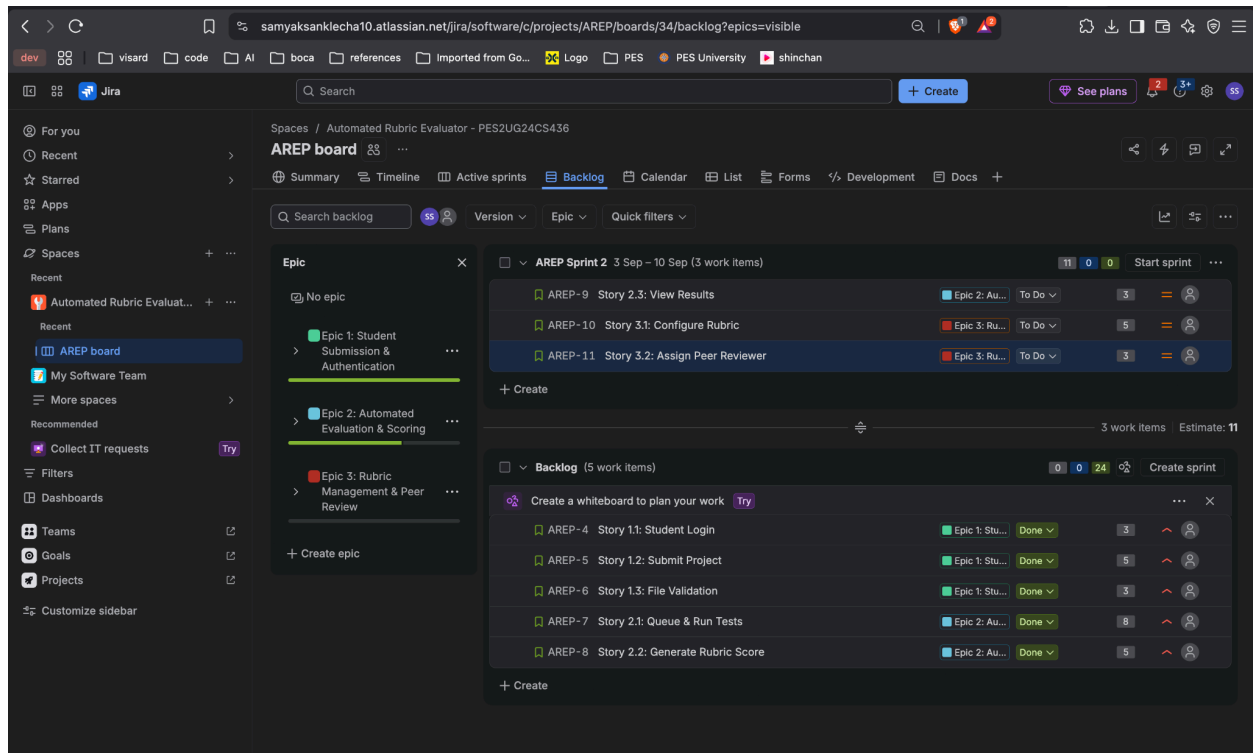

This is my main dashboard again where in backlog i can see that high priority stories are done and now i will create sprint 2 for the other user stories in epics

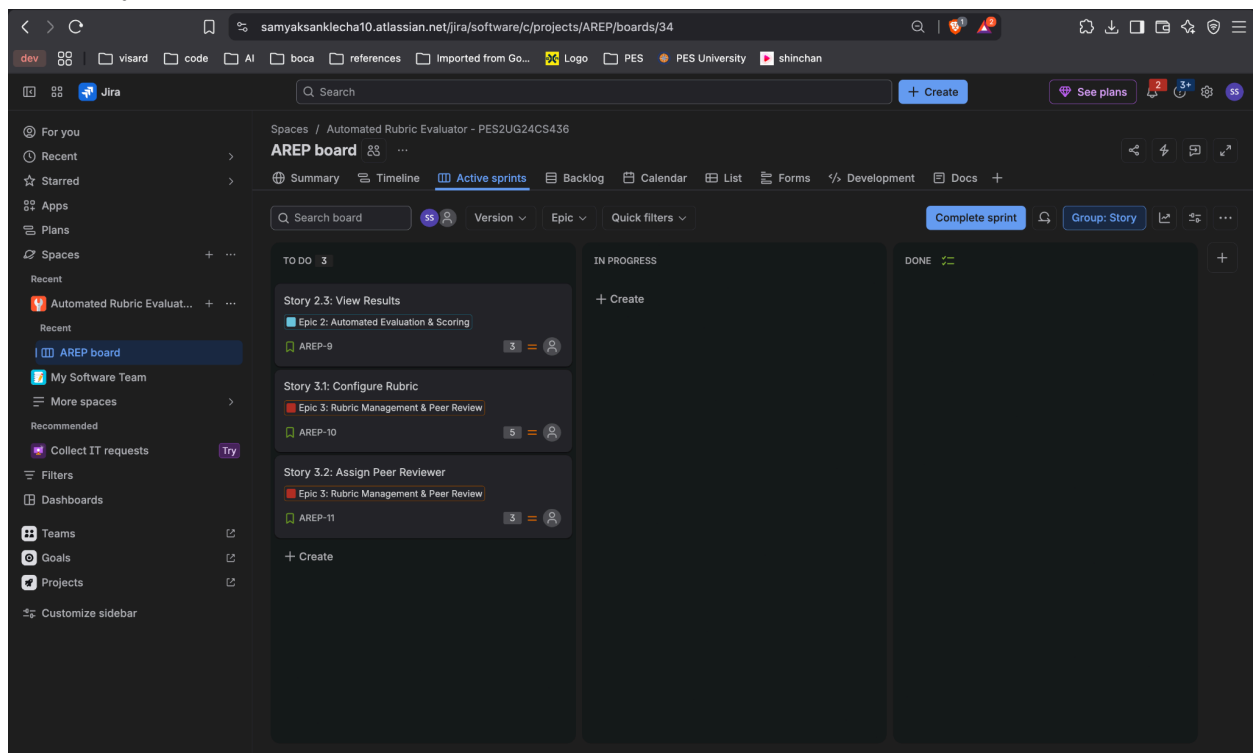

Task 7 -

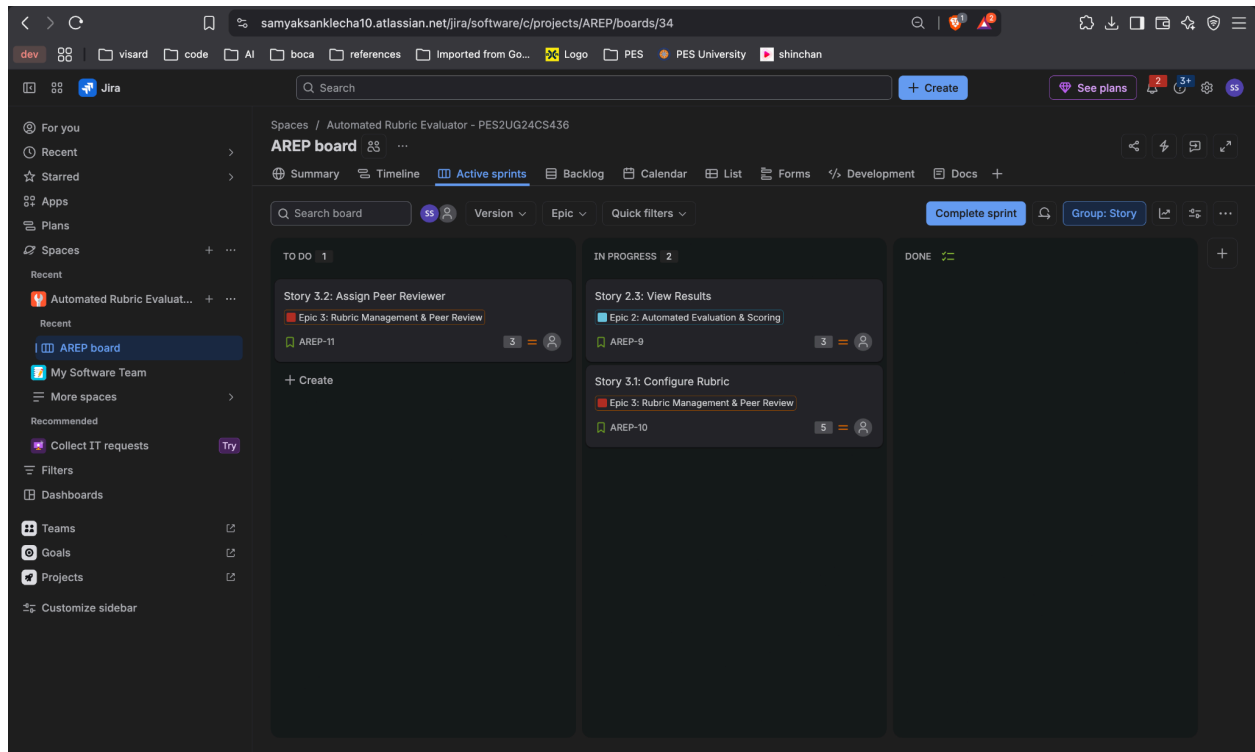

I have created a new sprint 2 for the medium priority stories and this is the backlog dashboard

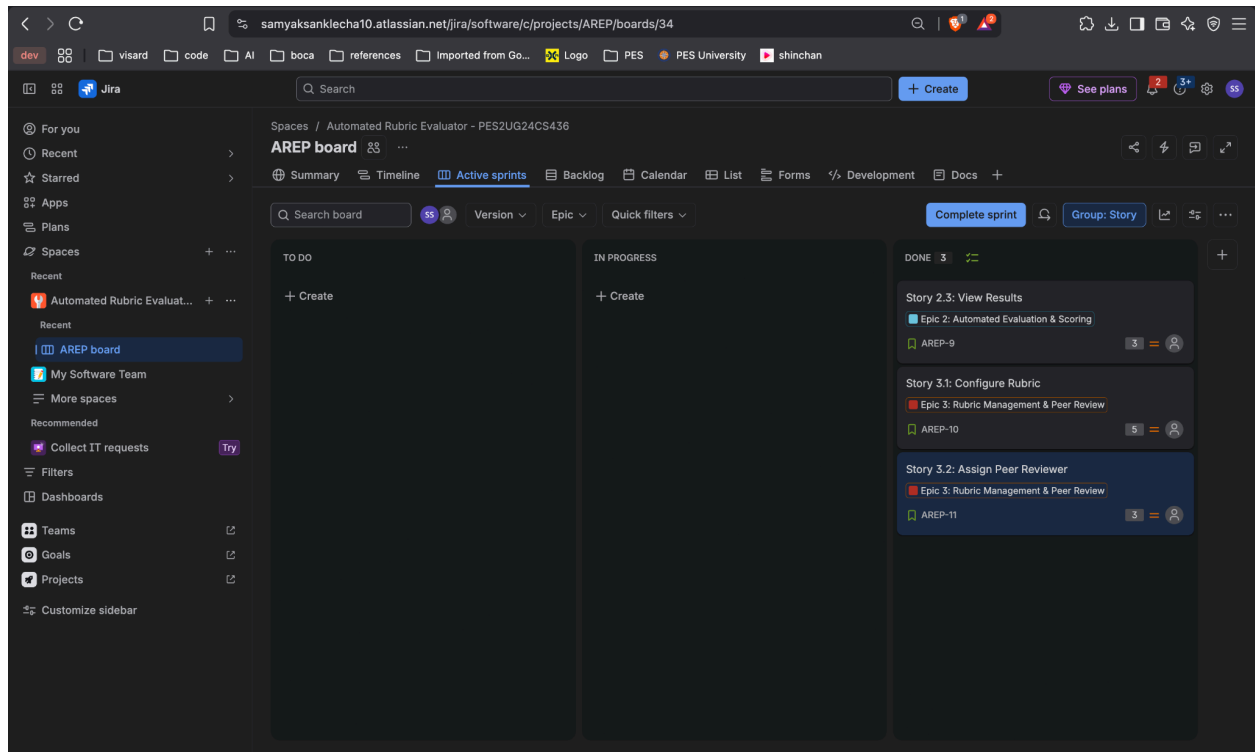

This is my active sprint board for sprint 2 and how tasks look

This is the general progress of tasks in my sprint

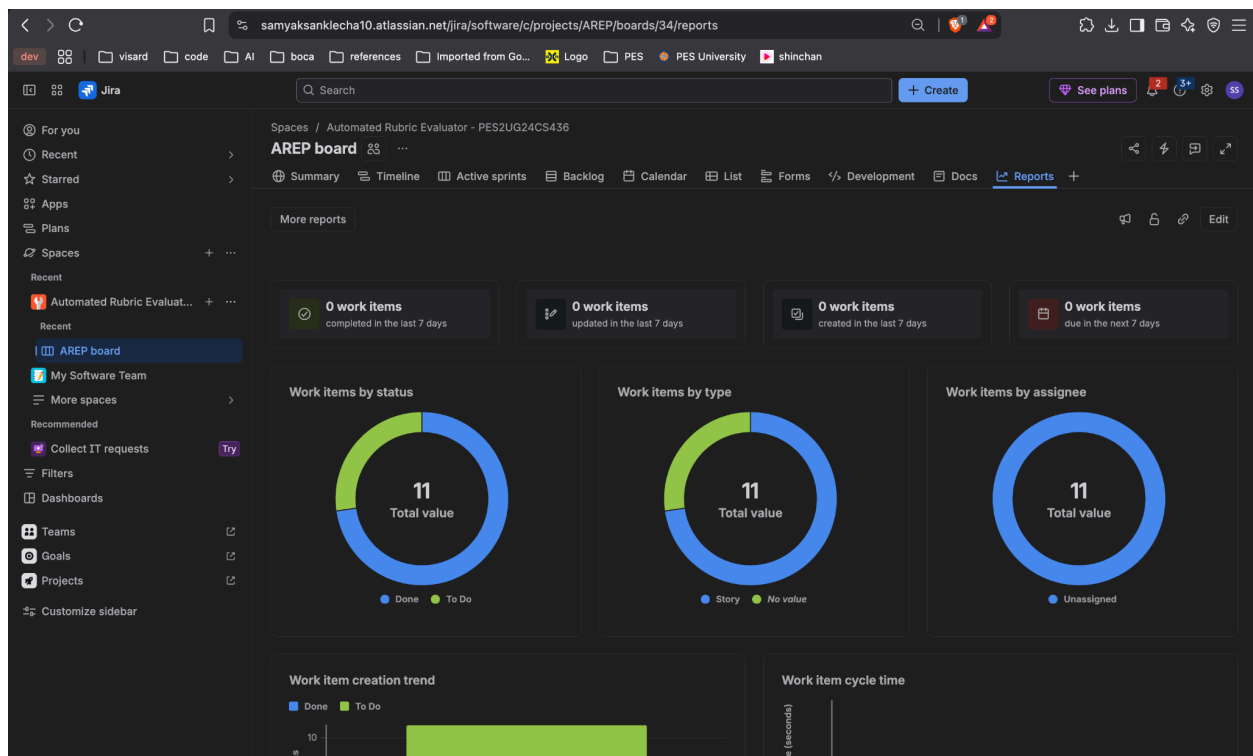

All stories are completed in sprint 2

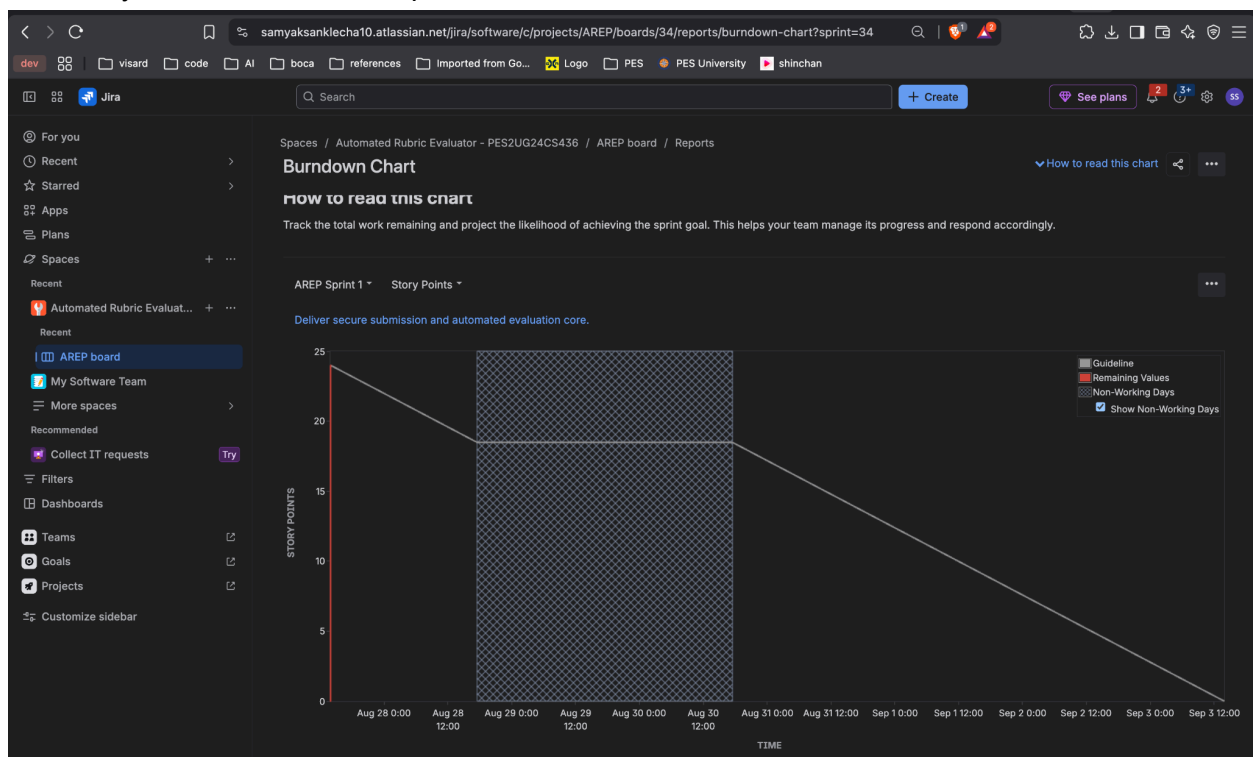

Task 8 -

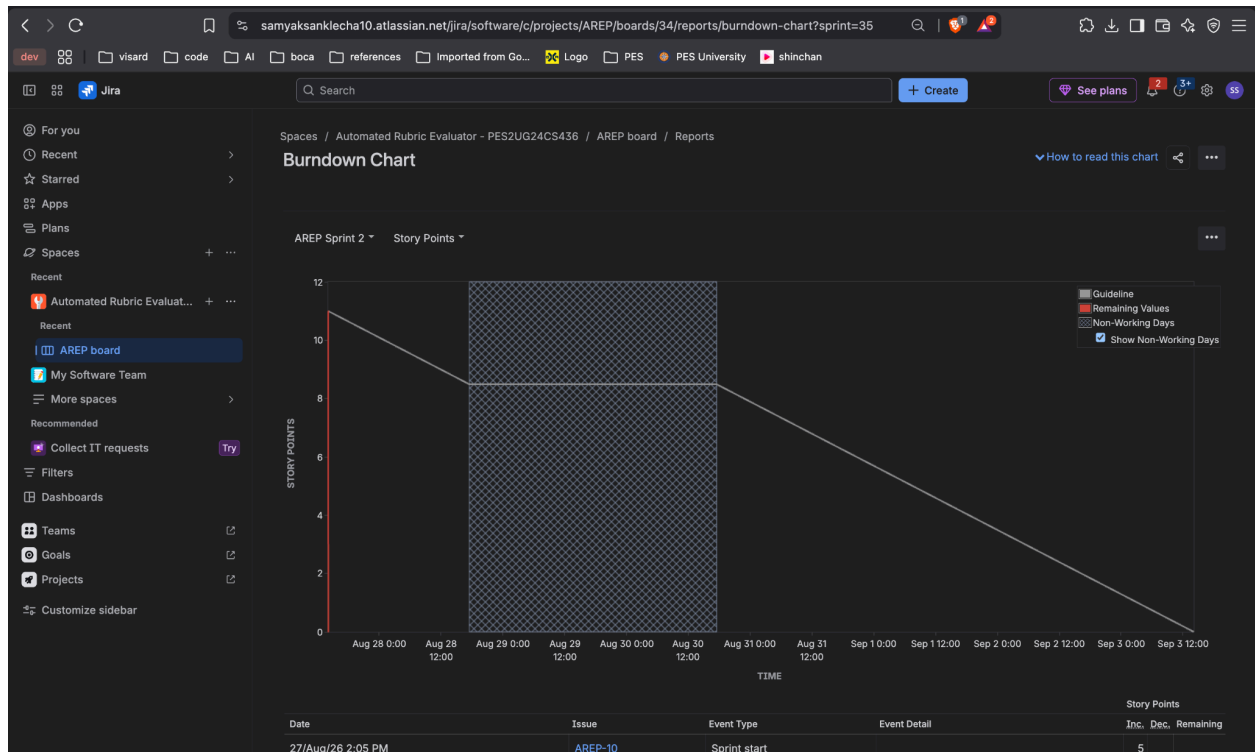

This is my reports / insights board which shows details about my sprints and now i will check the burndown chart.

This is my burndown chart for sprint 1

This is my burndown chart for sprint 2

Questions -

1) Did your estimations reflect the actual effort?

Ans - Yeah pretty much, the bigger stories like Queue & Run Tests got 8 points cause they were actually the hardest, and the simple ones like login got 3, so the estimates felt right.

2) Was your backlog well-prioritized?

Ans - Yeah i put all the core stuff (login, submit, validation, evaluation) as High first since the whole system depends on them, and other features as Medium .

3) How did your simulated sprint align with your plan?

Ans - It matched my plan, Sprint 1 had the High priority stories and Sprint 2 had the rest, and both got fully completed without anything spilling over.

4) What insights did the burndown chart give about your team's capacity?

Ans - The burndown dropped down to zero by the end which means i took on the right amount of work and the capacity matched what i planned.
